

RF & Microwave Subsystems

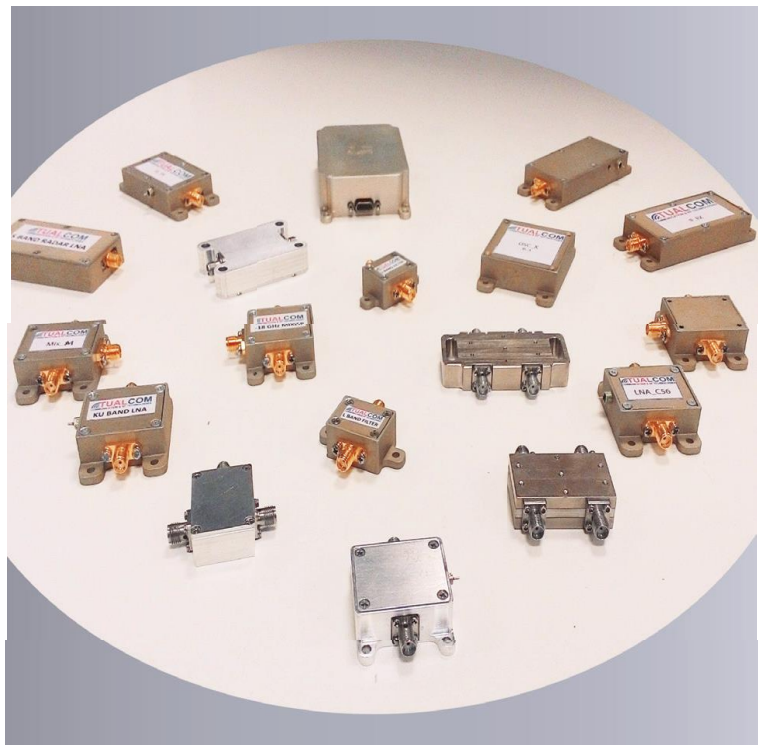

This equipment, developed by experienced engineers and technicians, is one of the most competitive programs in the RF & Microwave field.

Along with standard ones, custom products can also be designed and produced for specific applications.

Active and passive RF microwave systems, subsystems and components up to 18 GHz are developed and produced such as:

- Upconverters, Downconverters System,
- RF Front Ends,
- Amplifier Blocks,
- Low Phase Noise Local Oscillators,
- Low Noise Amplifiers
- High Power Amplifiers
- RF Filters,
- Power Dividers and Combiners, -Directional Couplers.

We are looking forward to talk to you about your special application.
